

V-NOVA

Introducing MPEG-5 Part 2 LCEVC

A codec to improve other codecs

Guido Meardi

Geneva, ITU Workshop on the Future of Media

8/10/2019

Why a Low Complexity Enhancement Video Coding Standard?

David Ronca

Director of Video Encoding
Facebook
(previously Netflix)

“

(...)

Encoder complexity is outpacing Moore's law.

(...)

The longer-term answer to video encoding can not be to simply add more CPU capacity. This is an unsustainable model; both financially, and environmentally.

(...)

Codec research must emphasize compression efficiency AND computational efficiency.

Here's a thought exercise: If the next video encoder maintained the efficiency of VVC/AV1 but reduced computational complexity by 50%, would we consider that a successful new codec?

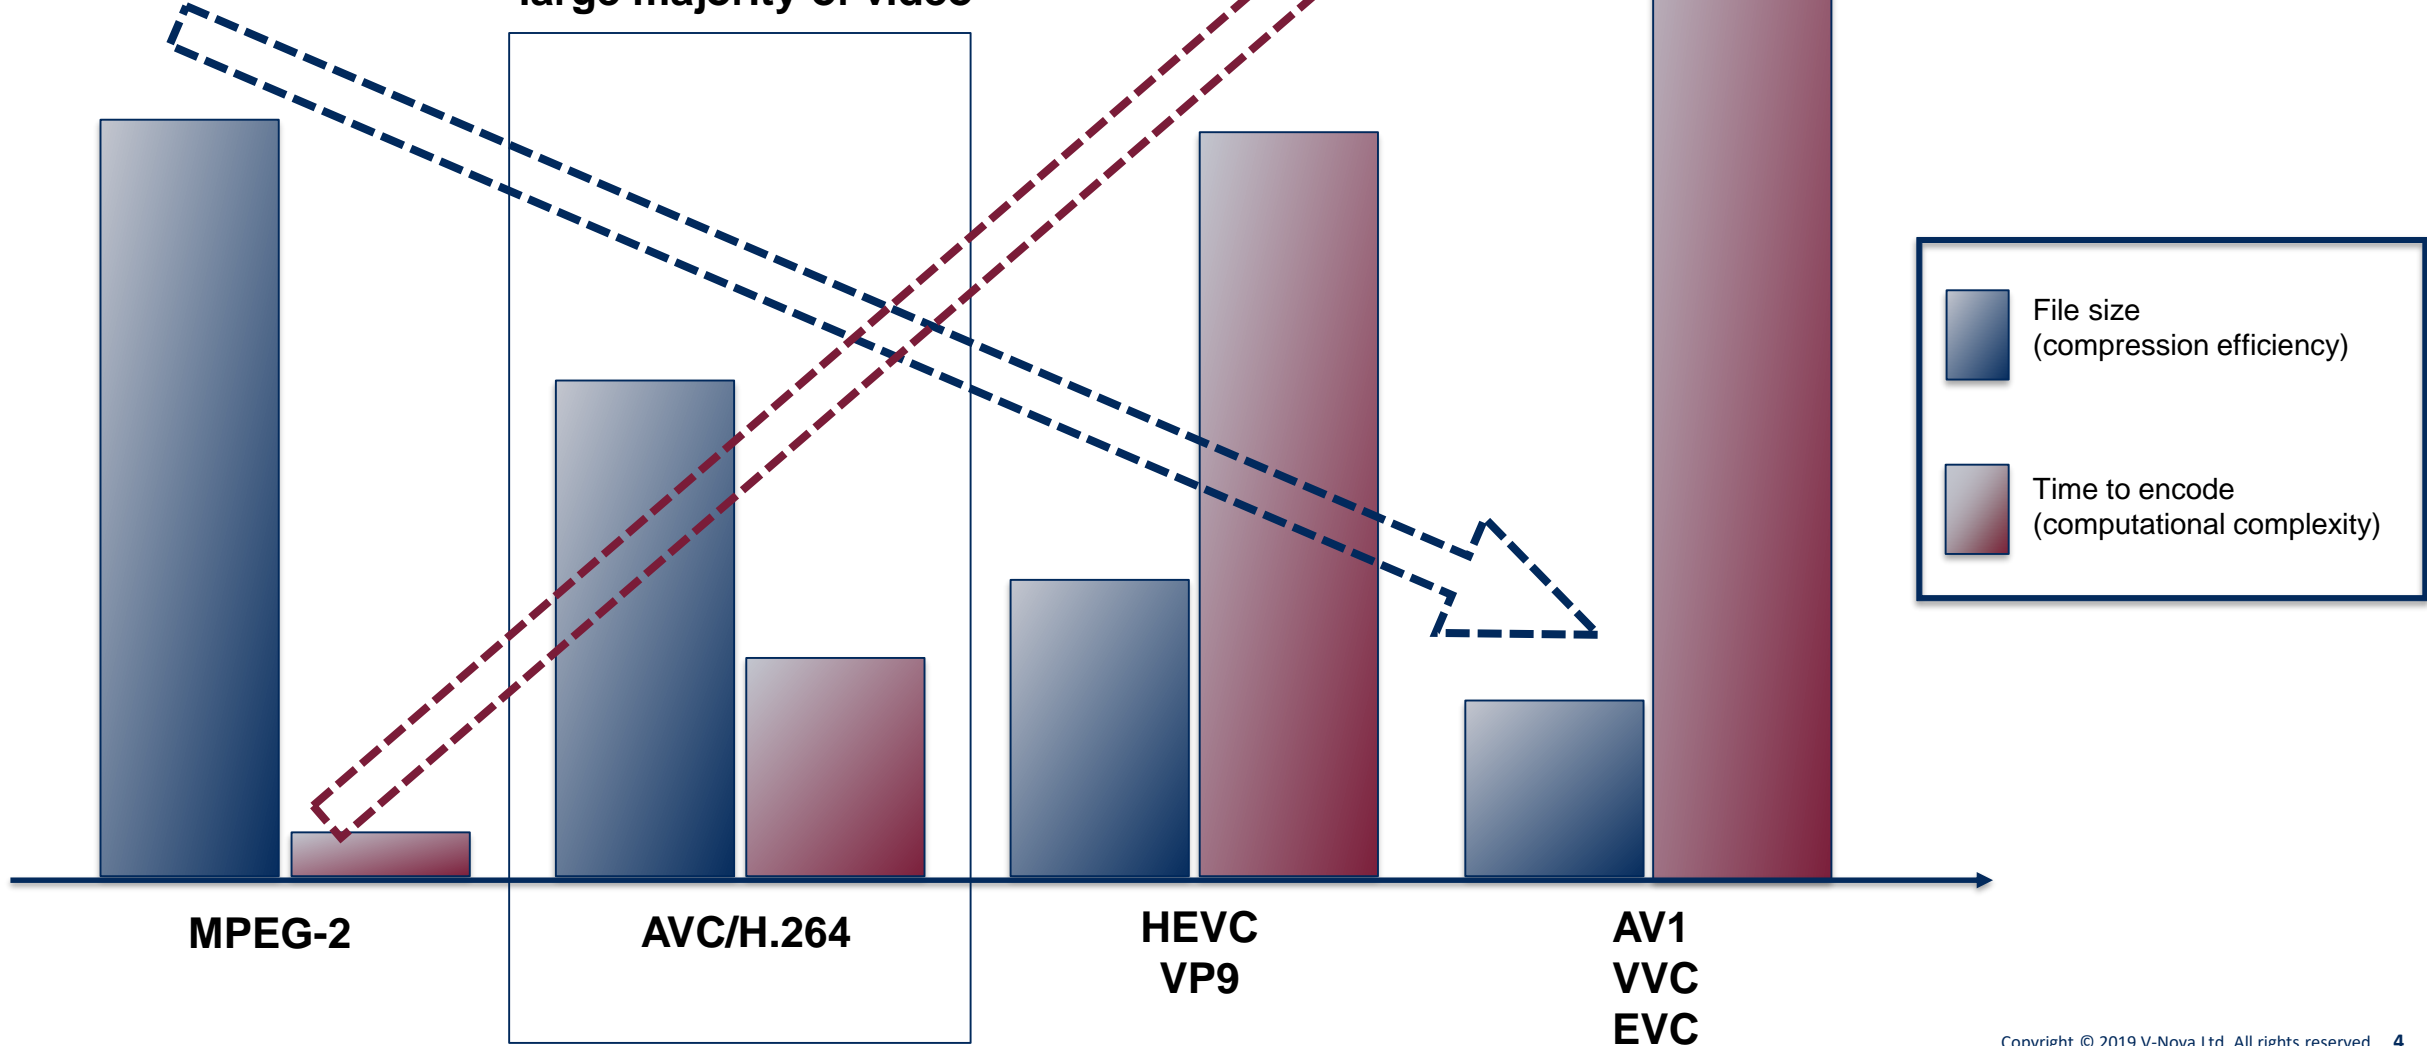

”

(from “Encoder complexity hits the wall”, 7/10/2019)

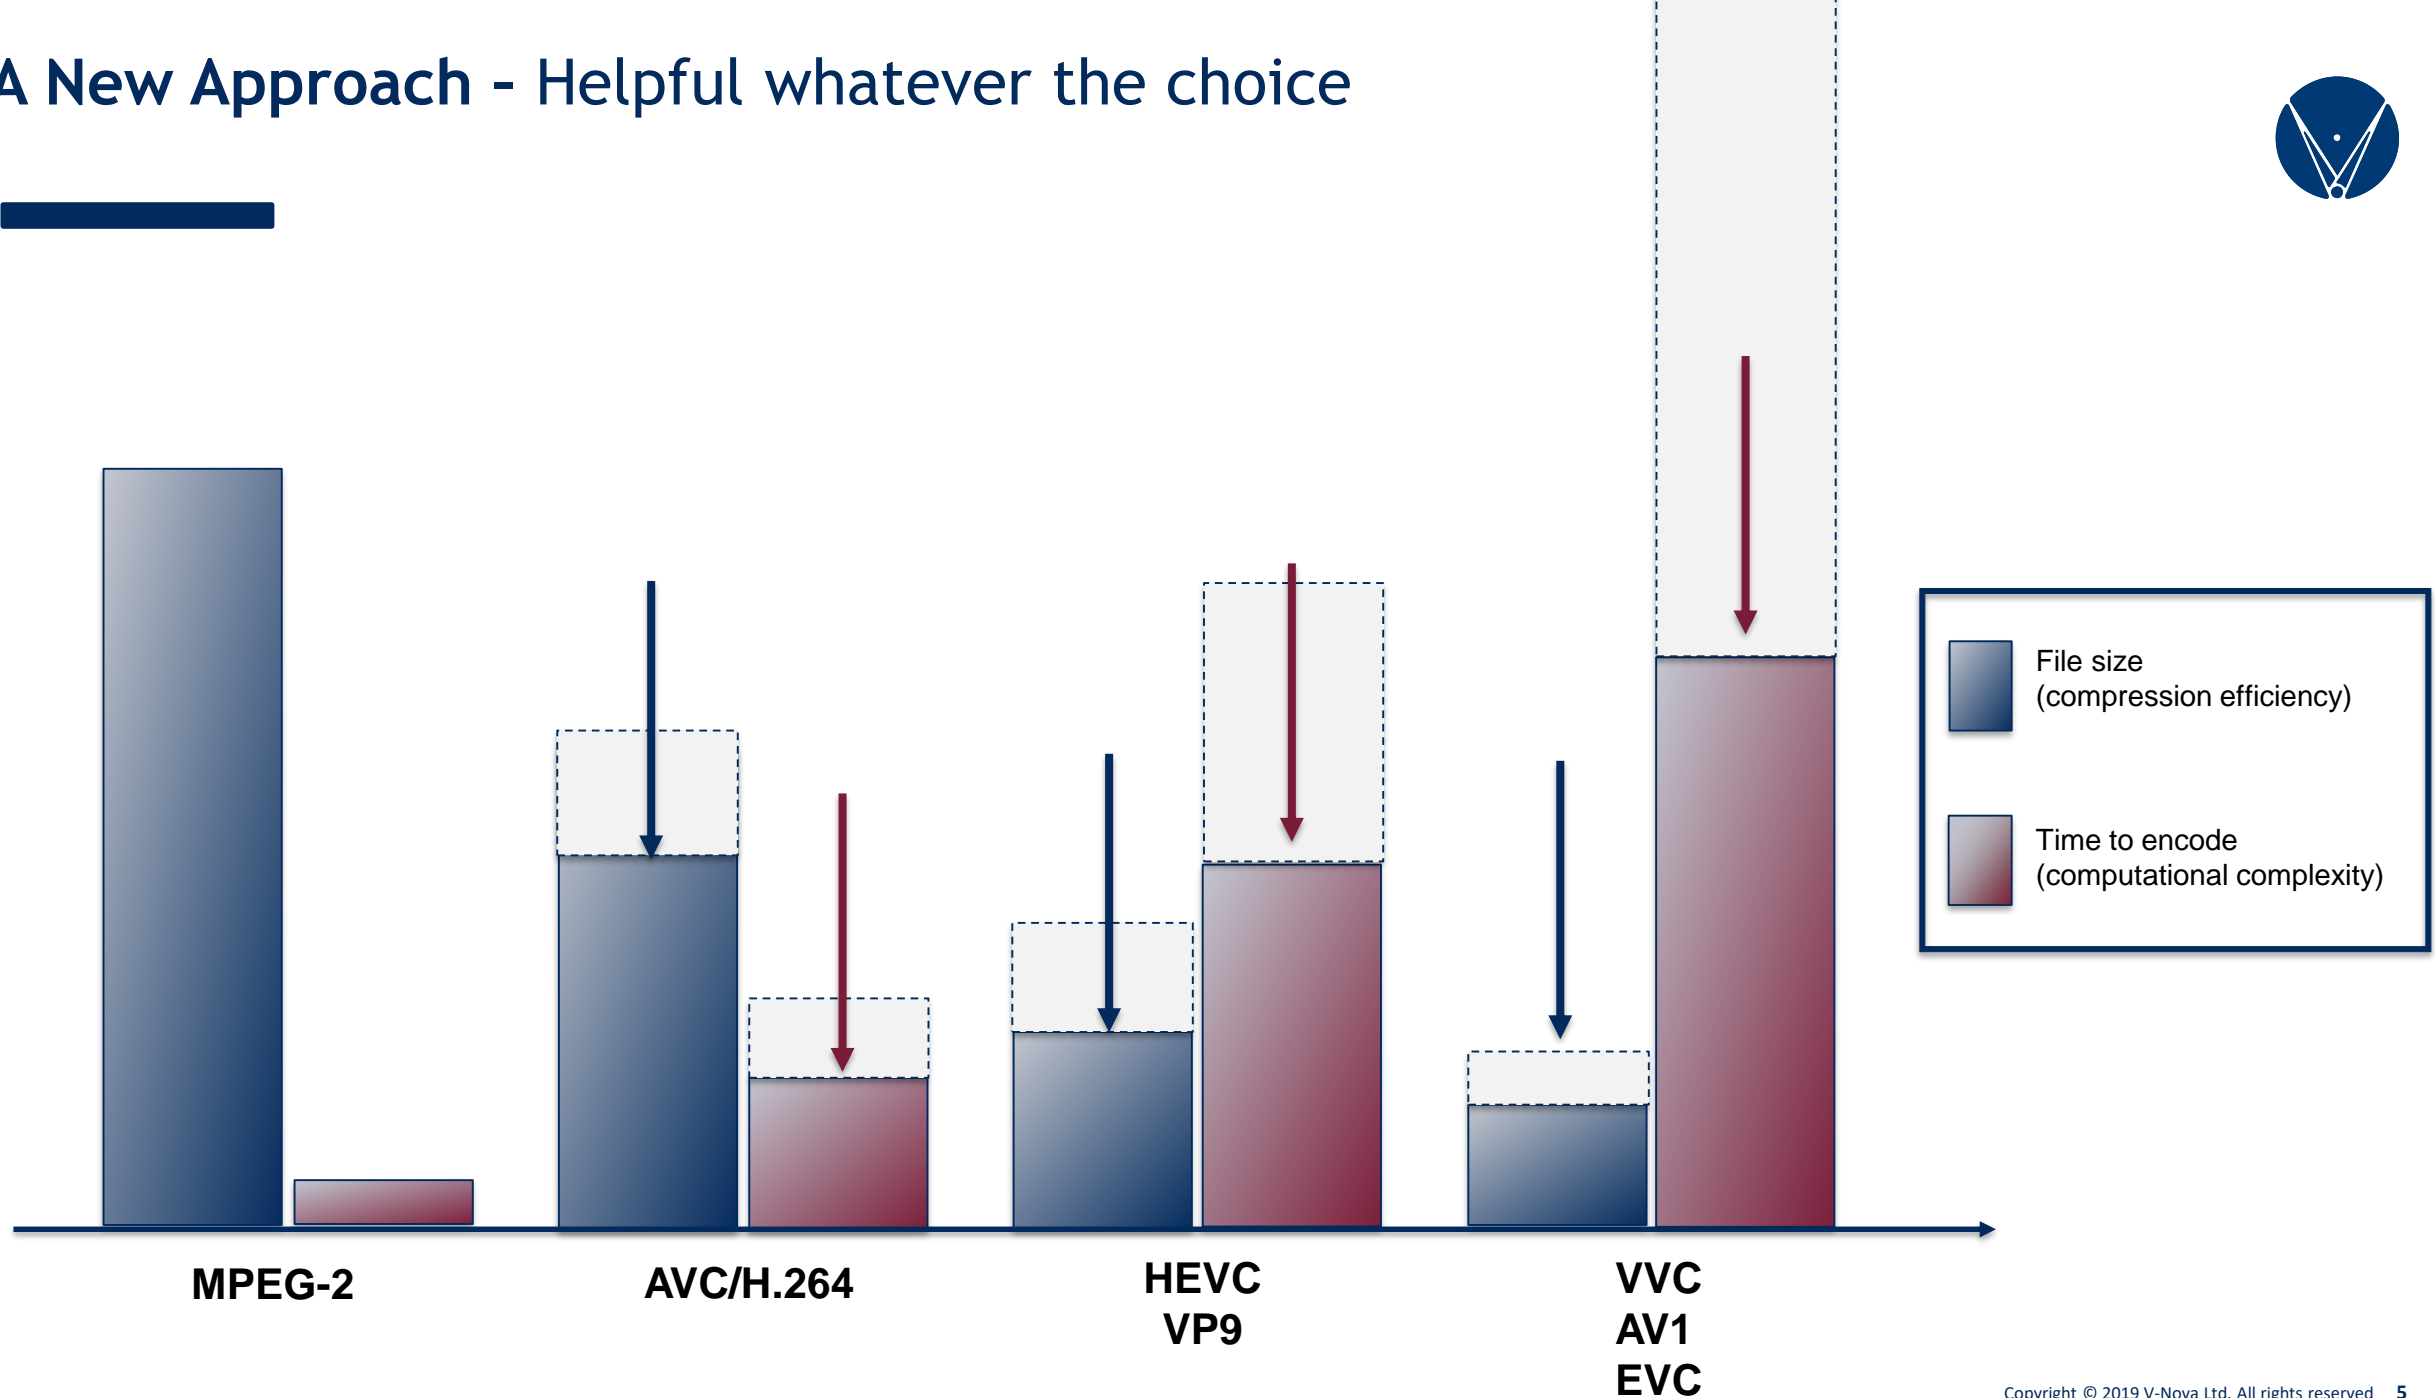

Codec Evolution - Better Compression, at a Cost

Legacy (2003), but still large majority of video

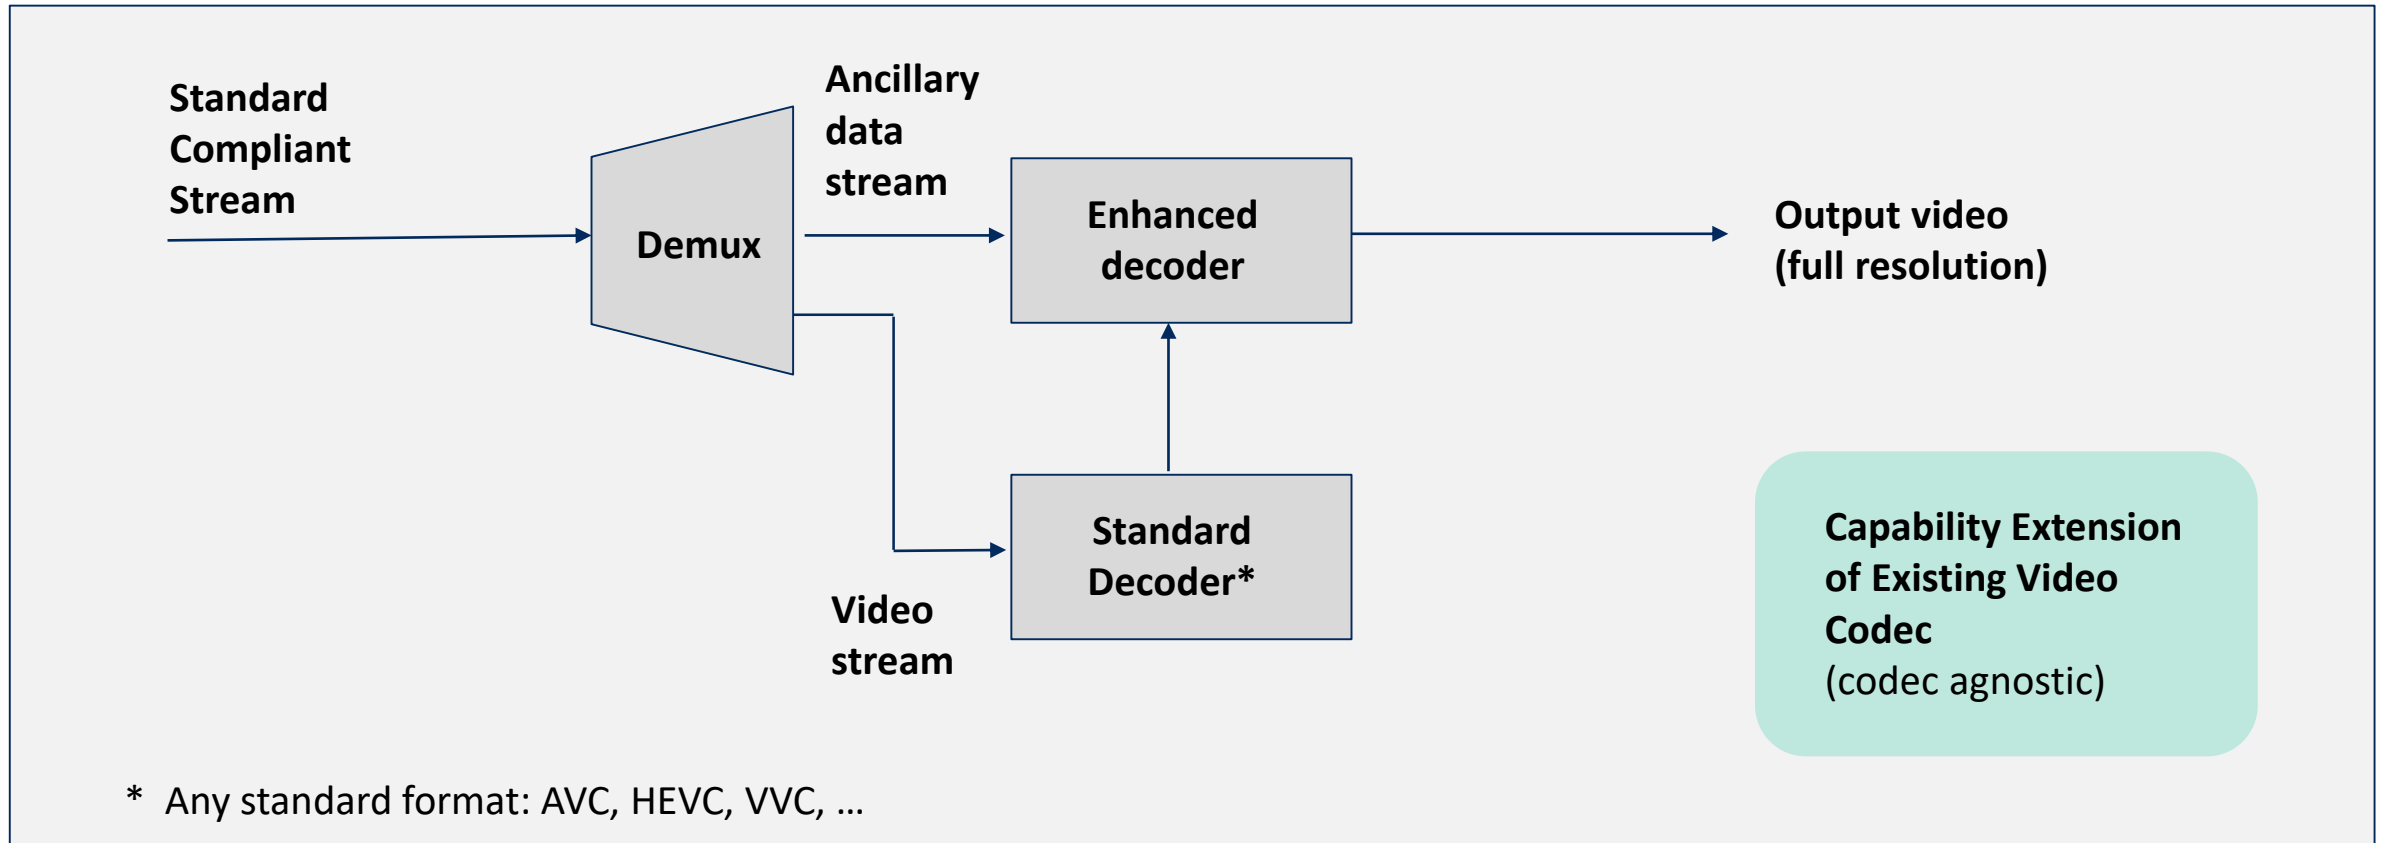

A New Approach - Helpful whatever the choice

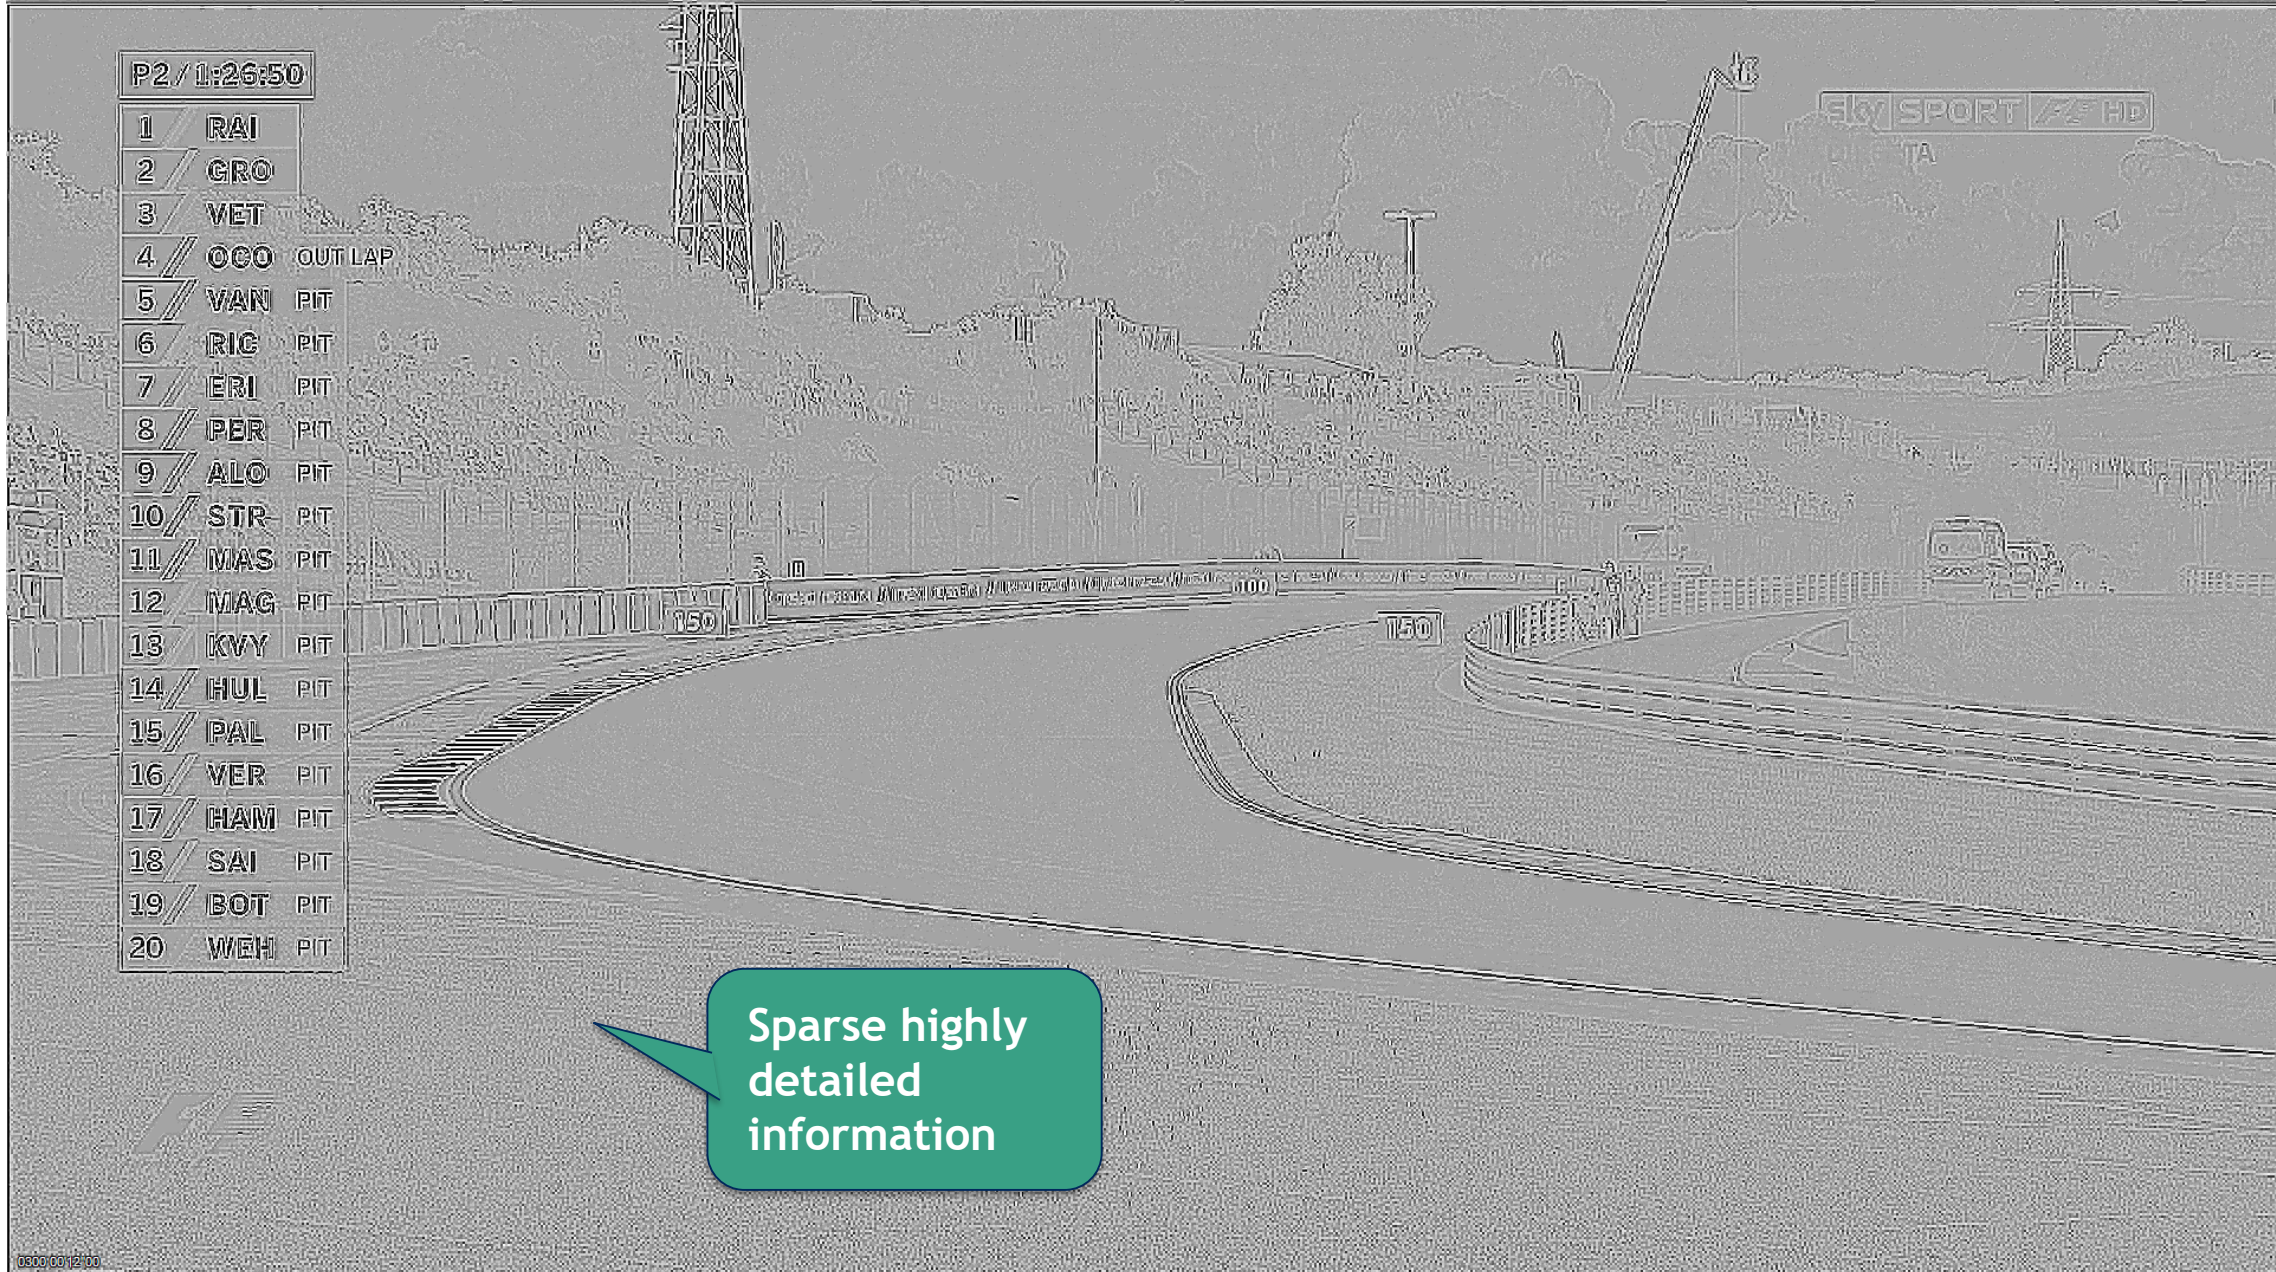

Low Complexity Enhancement Video Coding - What it is

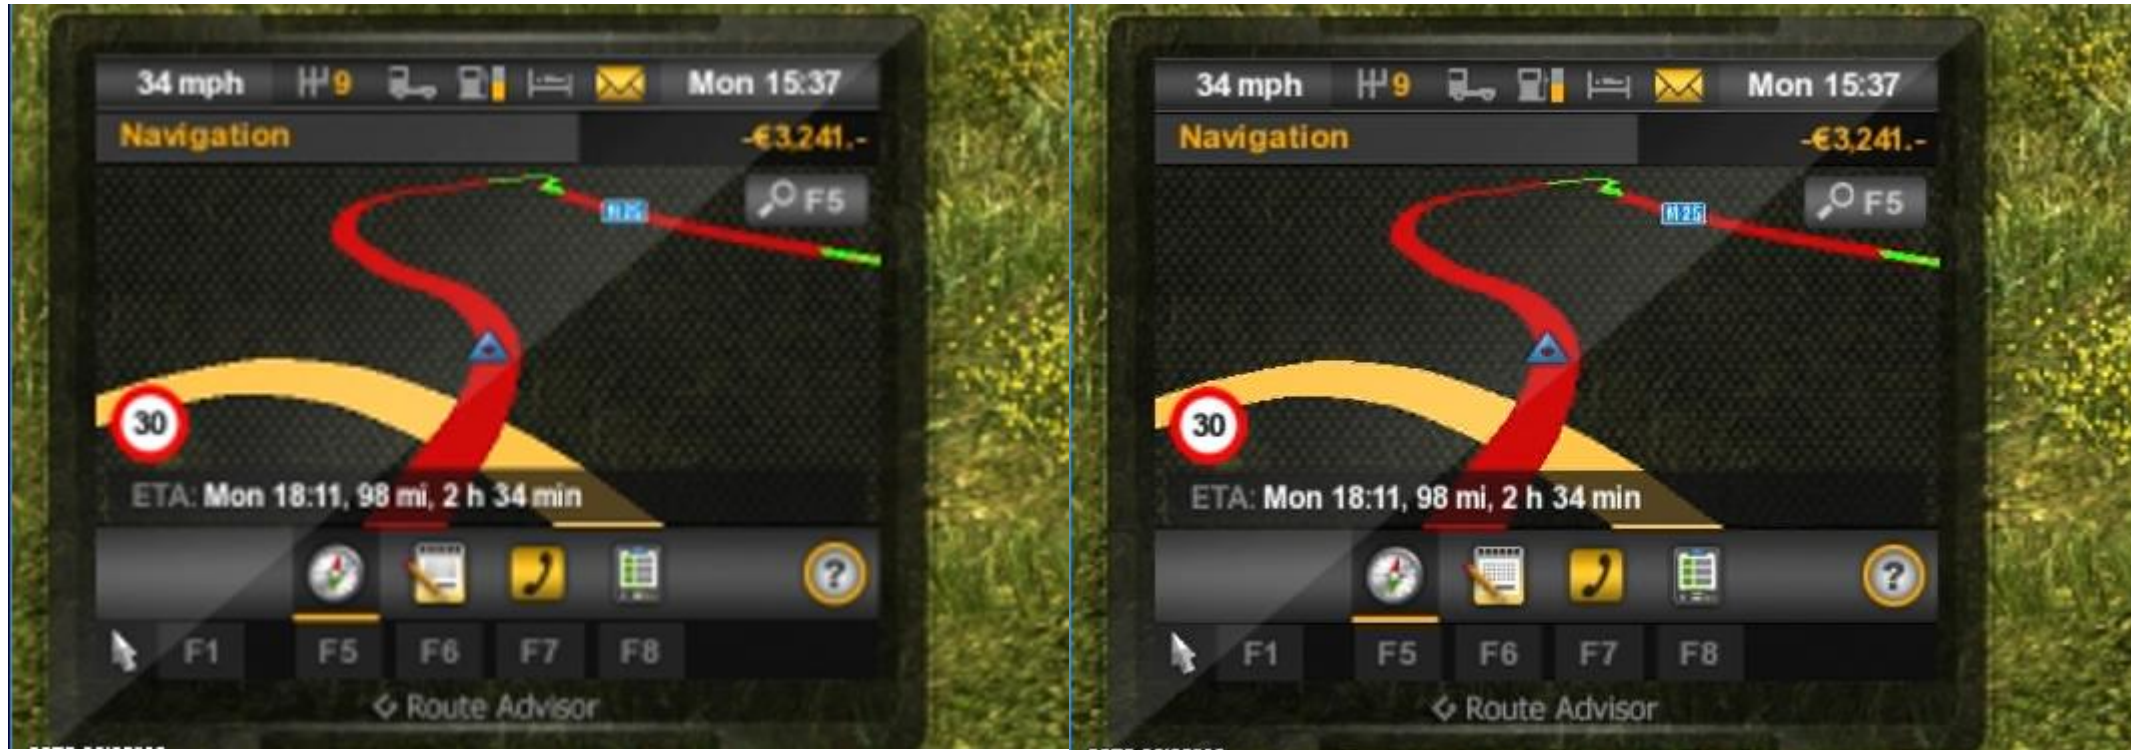

- **Codec-agnostic codec of enhancement data**, where **enhancing n-th generation codec** results in
 - ✓ **Compression performance** as close as possible to (n+1)-th generation codec
 - ✓ **Encoding and decoding complexity** in line with n-th generation codec

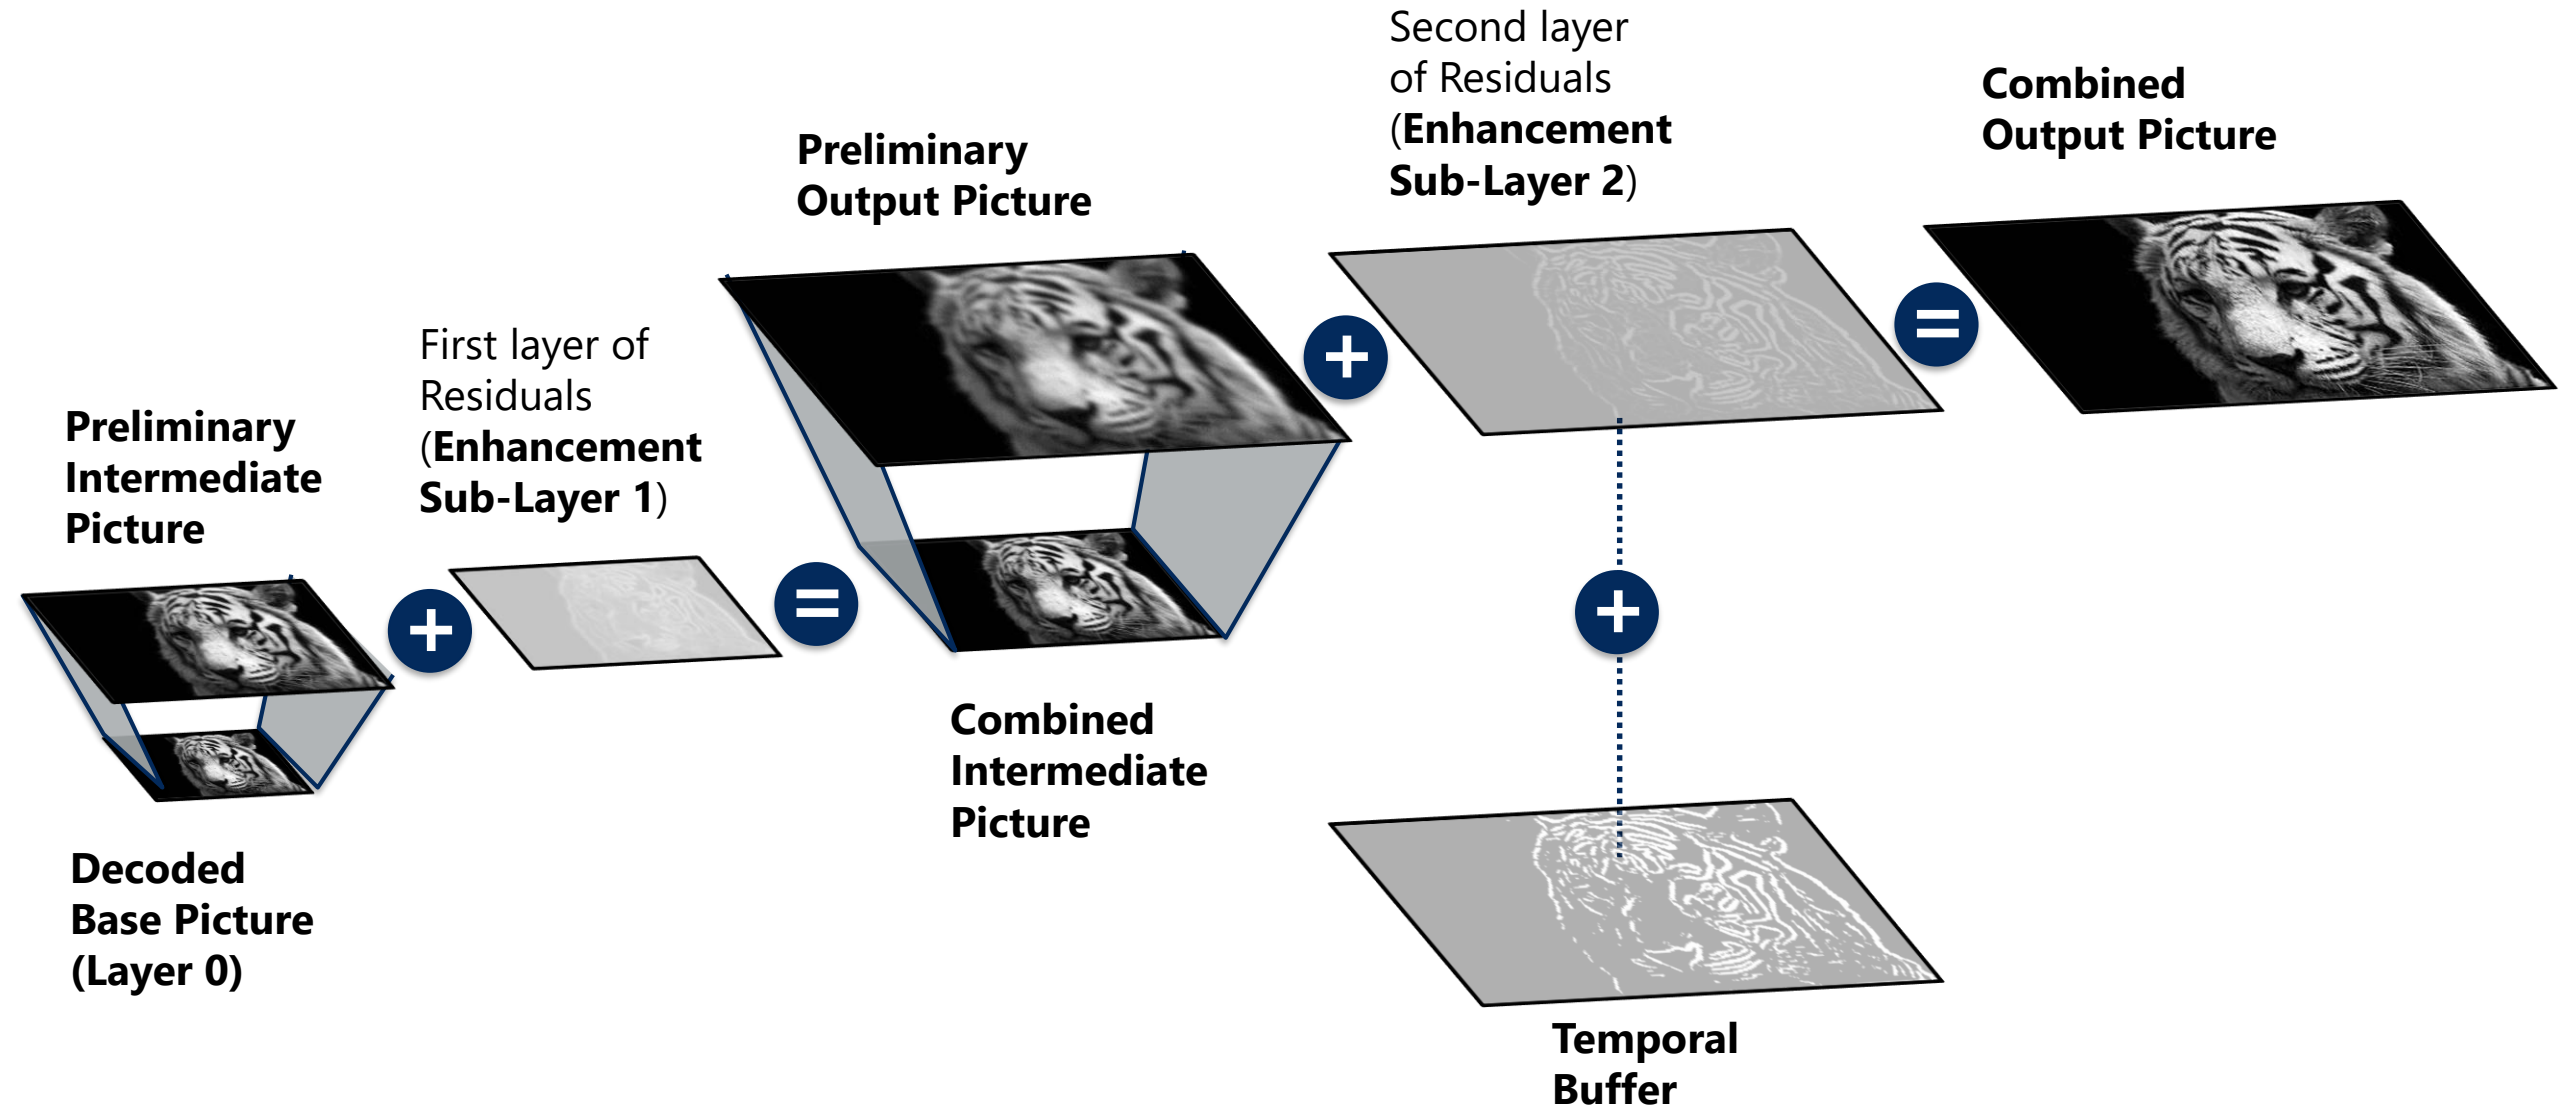

What is a sub-layer of enhancement residual data?

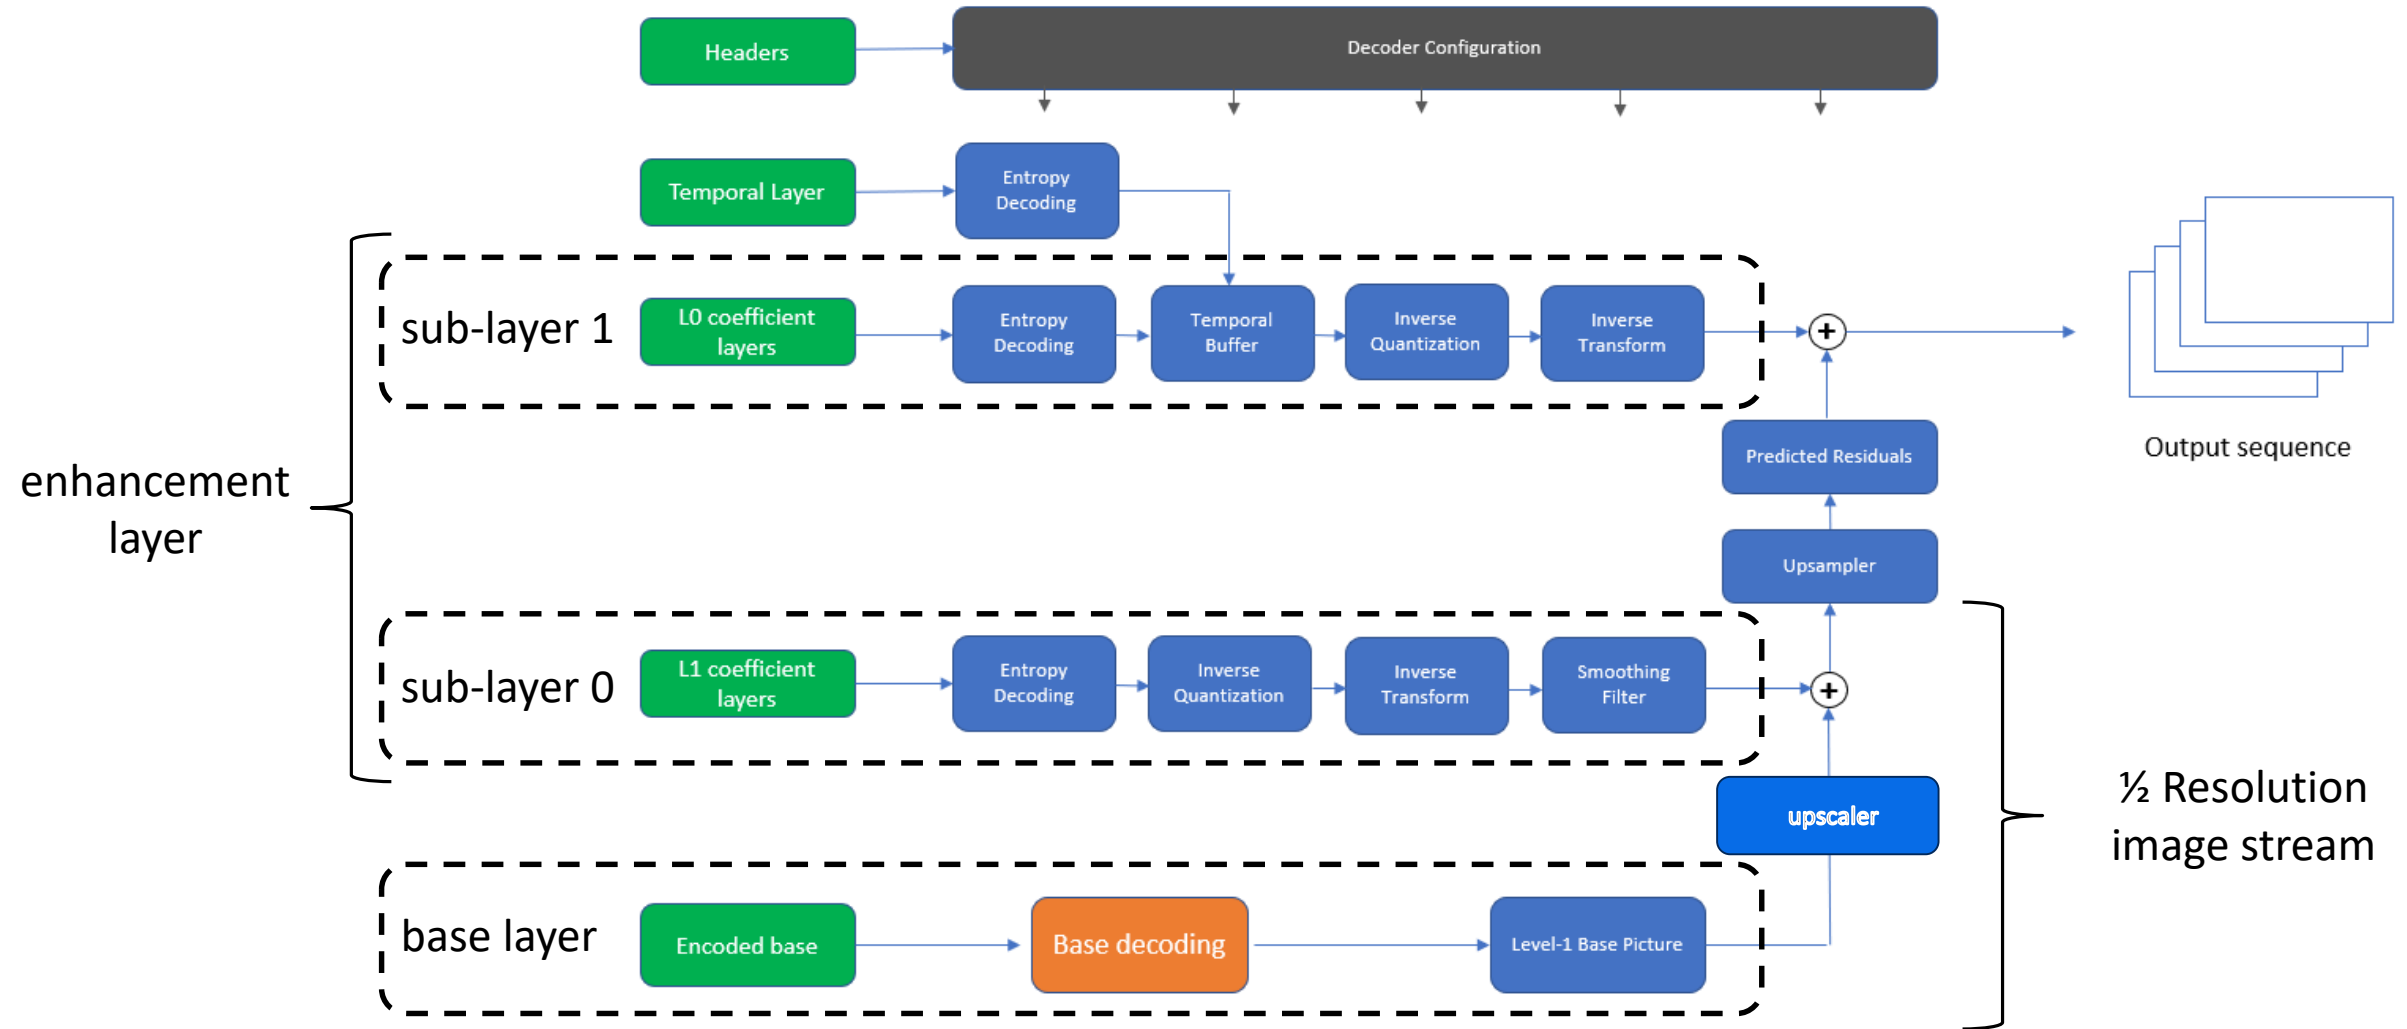

Beware of super-resolution, fidelity requires the actual data

How LCEVC works: Two Sub-layers of Residual Data

Signal flow

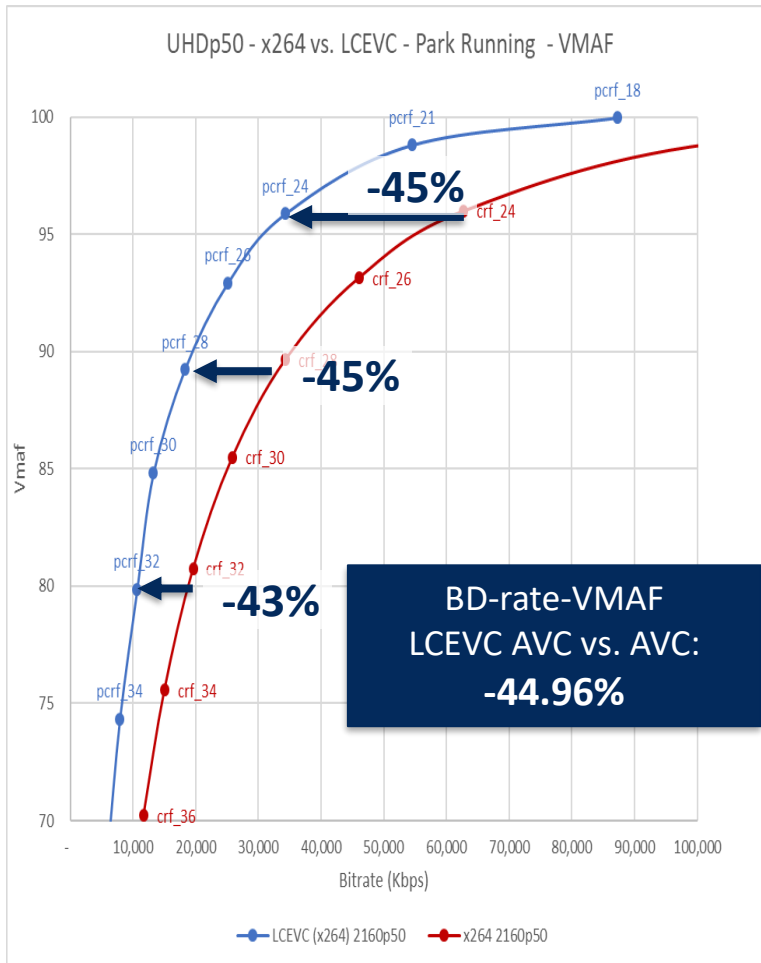

A standard that it helpful for the old, the current, and the future

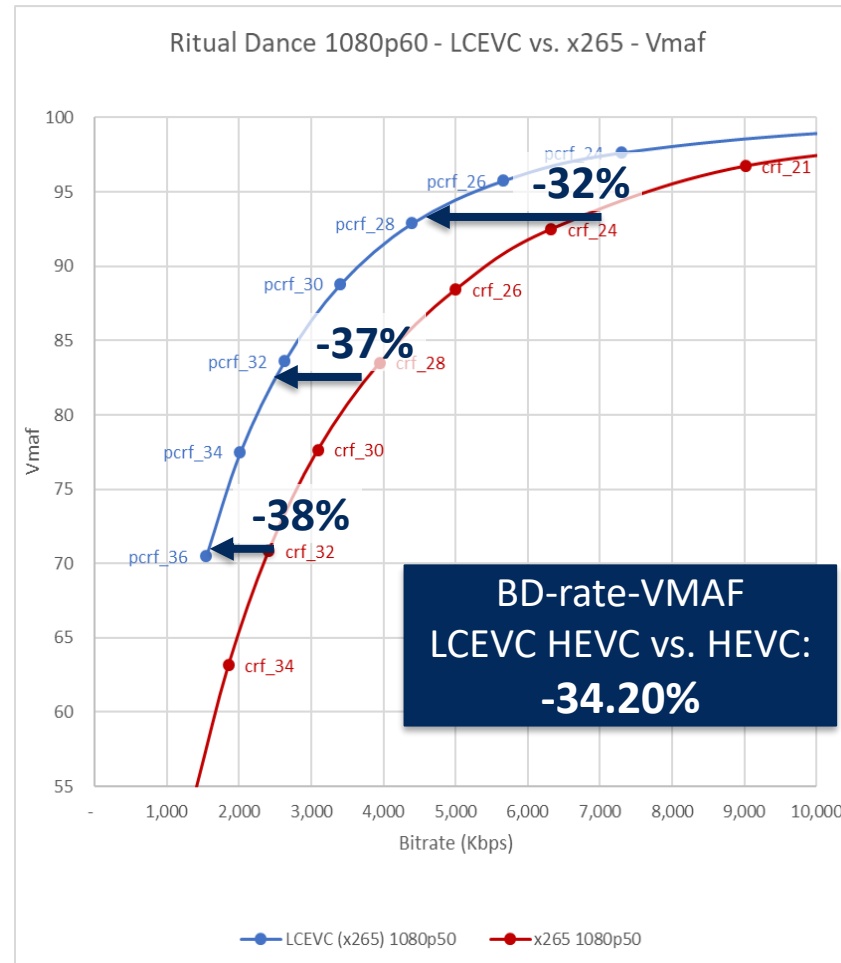

Compression benefits

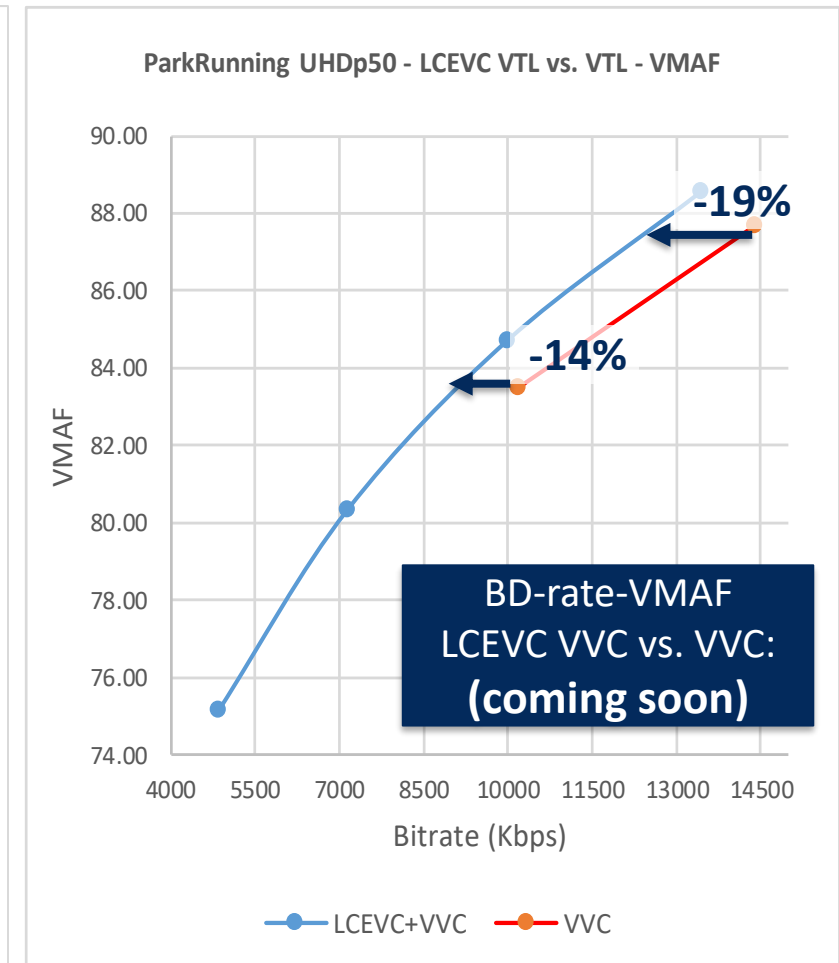

Improving the quality of AVC ...

... as well as HEVC ...

... as well as VVC

What it means in practice - Example CampFire sequence

A standard that it helpful for the old, the current, and the future

Encoding complexity benefits

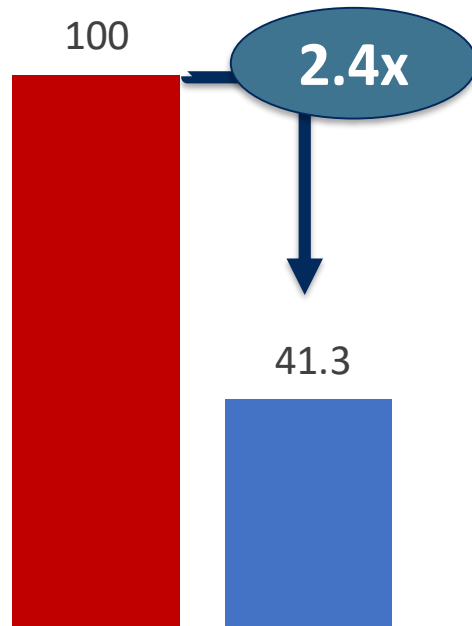

Reducing the complexity of AVC ...

... as well as HEVC ...

... as well as VVC

LCEVC AVC Encoding Time,
as % of AVC Encoding Time

100% = 74 sec

■ x264 ■ LCEVC x264

LCEVC HEVC Encoding Time,
as % of HEVC Encoding Time

100% = 736 sec

■ x265 ■ LCEVC x265

LCEVC VVC Encoding Time,
as % of VVC Encoding Time

100% = 1,412,882 sec

■ VTL ■ LCEVC VTL

The collaborative work performed in the past months produced notable improvements

	V-Nova CfP Submission 1 (P11)	V-Nova CfP Submission 1 (P11)
	P11 JM vs. JM	P11 JM vs. JM
	BD-rate-PSNR	BD-rate-MOS
ParkRunning3	-32.68%	-51.70%
Campfire	-18.32%	-39.30%
Average Class A	-25.50%	-45.50%
	LCEVC	
	LCEVC JM vs. JM	
	BD-rate-PSNR	
ParkRunning3	-43.52%	(MOS still to be done)
Campfire	-28.54%	
Average Class A	-36.03%	
	LCEVC	
	LCEVC JM vs.P11 JM	
	BD-rate-PSNR	
ParkRunning3	-17.28%	(MOS still to be done)
Campfire	-13.80%	
Average Class A	-15.54%	

- The good results of the CfP improved materially!
- Specification, definitions and overall clarity also improved significantly

Thank You
